

Project Design Phase Solution Architecture

Date	03/07/2026
Roll No	24A55A4212
Project Name	Visitor Management System
Maximum Marks	4 Marks

Solution Architecture:

The **Visitor Management System** in ServiceNow is built on the **ServiceNow platform** using the **Service Catalog, Flow Designer, Approval Workflow, Email Notifications, and Visitor Request Database**. Employees submit visitor requests through the self-service portal by providing visitor details. The system validates the information, captures the required details, creates a visitor request record, and automatically routes the request to the appropriate host or manager for approval. After approval, the security team manages visitor **check-in and check-out**, while email notifications keep employees, hosts, and security staff informed throughout the process. Finally, the visitor status is updated in the **Visitor Request Database**, ensuring secure visitor tracking, complete visibility, and efficient visitor management.
